                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New immunoglobulin molecules are described that bind kinase insert domain-containing receptor (KDR) with a comparable affinity to human vascular enotations receptor (KDR) with a comparable affinity to human vascular enotation. The immunoglobulin may be a multivalent single chain antibody, a monovalent single chain antibody, a diabody, a chimarised antibody, a diabody, a chimarised antibody, a diabody, a crimabody, a chimarised antibody.

The immunoglobulin molecules bind specifically to an extracelfular domain of the KDR receptor with the same affinity as VEGF. Overexpression of VEGF has been immulationme, of human tumour cell lines including glioblastoma multiforme, hemangloblastoma, central nervous system neoplasms and AIDS associated Karposi's sarcoma. The antibodies therefore have applications in treating these conditions. This sequence encodes a firm than the complementary determining region of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides
                                                                                                                                                                                        Novel immunopobulin molecules binding kinase insert domain-containing receptor with the same affinity as vascular endothelial growth factor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Heavy chain complementarity determining region H2 (CDRH2) version #1.

The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. Pl has an antigen-binding site located to the N terminus of immunoglobulin (Ig) light chain constant domain (CL domain), and P2 has an antigen-binding site located to the N terminus of the CHI domain. (I) is useful for: neutralising the activation of a vascular endothelial growth factor (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis; ceducing endothelial cell proliferation; inhibiting angiogenesis; ceducing endothelial cell proliferation; inhibiting useful for: migration of human leukaemia cells; blocking interaction of a protein and its ligand; promoting interactions between immune cells and target cells; can in vivo and in vitro for investigative, diagnostic or treatment methods. The design of (I) provides for efficient production so that substantially all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute the Fc region (e.g., CH2 and CH3 for an ig6 molecule) of a natural antibody and which provide other antibody functions can be present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is no requirement for processing in vitro to obtain the complete product. This peptide sequence represents the heavy chain variable domain complementarity determining region H2 (CDRH2) version #1 incorporated into an antigen-binding protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           central nervous system neoplasms; AIDS associated Karposi's sarcoma; acquired immune deficiency syndrome; AIDS; human.

                                                                      New immunoglobulin molecules are described that bind kinase insert conclaining receptor (KDR) with a comparable affinity to human vascular endothelial growth factor (VEGF). The antibodies neutralise KDR activation. The immunoglobulin may be a multivalent single chain antibody, a monovalent single chain antibody, a diabody, a crimabody, a monovalent single chain antibody, a diabody, a triabody, a monovalent single chain antibody, a diabody, a triabody, a monovalent single chain antibody. The immunoglobulin molecules bind specifically to an extracellular domain of the KDR receptor with the same affinity as VEGF. Overexpression of VEGF has been implicated in a number of human tumour cell lines including glioblastoma multiforme, hemangloblastoma, central nervous system neoplasms and AIDS associated Karposi's sarcoma. The antibodies therefore have applications in treating these conditions. This sequence encodes a preferred heavy chain complementary determining region of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes an antigen-binding protein (1) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which
Novel immunoglobulin molecules binding kinase insert domain-containing receptor with the same affinity as vascular endothelial growth factor,
                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antigen-binding protein; antibody heavy chain variable domain; cytostatic; angiogenesis inhibitor; tumour; leukaemia; antibody; vascular endothelial growth factor receptor; VEGF; cell proliferation inhibitor.
                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                     Length 117;

```
antigen-binding site located to the N terminus of immunoglobulin (1g)

light chain constant domain (CL domain), and P2 has an antigen-binding

site located to the N terminus of the CH1 domain. (I) is useful for:

constant domain (CL domain), and P2 has an antigen-binding

site located to the N terminus of the CH1 domain. (I) is useful for:

constant of the activation of a vascular endothelial growth factor

(VEGF) receptor; reducing tumour growth; inhibiting angiogenesis;

reducing endothelial cell proliferation; inhibiting vEGF induced

migration of human leukaemia cells; blocking interaction of a protein and

its ligand; promoting interactions between immune cells and target cells;

and in vivo and in vitro for investigative, diagnostic or treatment

methods. The design of (I) provides for efficient production so that

substantially all of the antigen-binding proteins produced are assembled

in the desired configuration. (I) is bivalent and bispecific, homogeneous

and in tetrameric form. The heavy chain constant domains which constitute

the Fc region (e.g., CH2 and CH3 for an IgG molecule) of a natural

cantibody and which provide other antibody functions can be present. There

so no requirement for processing in vitro to obtain the complete product.

This sequence represents a heavy chain variable domain (VH) incorporated

into Fv, an engineered protein containing a heavy chain variable domain

and a light chain variable domain in one polypeptide chain, described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antigen-binding protein; single chain variable fragment; scFv; antigen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes an antigen-binding protein (I) comprising a complex off two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. Pl has an antigen-binding site located to the N terminus of immunoglobulin (Ig) in coated to the N terminus of immunoglobulin (Ig) is useful for: Iight chain constant domain (CL domain), and P2 has an antigen-binding cs site located to the N terminus of the CH1 domain. (I) is useful for: neutralising the activation of a vascular endothelial growth factor (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis, reducing endothelial cell proliferation; inhibiting vEGF induced migration of human leukaemia cells; blocking interaction of a protein and its ligand; promoting interactions between immune cells and target cells; and in vivo and in viro for investigative, diagnostic or treatment can in vivo and in viro for investigative, diagnostic or treatment companies, The design of (I) provides for efficient production so that csubstantially all of the antigen-binding proteins production so that csubstantially all of the antigen-binding proteins production so that can in the desired configuration. (I) is bivalent and bispecific, homogeneous can din tetrament for processing in vitro to obtain the complete product. This is the amino acid sequence of a single chain variable fragment (SCF), an engineered protein containing a variable light and variable fragment containing a variable light and variable fragment contains the complete product.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                          New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cytostatic; heavy chain hypervariable region; VH; myelocytic leukaemia; lymphocytic; erythrocytic; monocytic; multiple myeloma; lymphoid cell; Hodgkin's disease; complementarity determining region-2; CDR-2; mouse.

The invention relates to a method for inhibiting the growth of non-solic tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VEGFR) in mammals particularly humans. The method involves treating the mammals with humanised VEGFR monoclonal antibodies (antagonists). Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human ontains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is humanised antibody murine heavy chain hypervariable region (VH) CDR-2 used in the

                                                                                                                                                                                                                                           The present sequence is that of complementarity determining region of the heavy chain variable region (see also AAB82701) of IMC-1C11, a mouse-human chinneric antibody that has vascular endothelial growth factor (VEGF) antagonist activity. The antibody, or a fragment of it, can be used as an anti-angiogenic molecule, together with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a controlling as ignificant toxicity of the chemotherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a preventing significant toxicity of the chemotherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a vascular endothelium survival factor such as VEGF or its receptor, and is especially IMC-1C11. Conditions that can be treated include a neoplasm, a colladen-vascular disease or an autoimmune disease, especially a soild tumour, including breast carcinoma, lung carcinoma, prostate carcinoma, covarian carcinoma, neuroblastoma, central nervous system tumour, covarian carcinoma, entitiorme or melanoma (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Heavy chain complementarity determining region H2 (CDRH2) version #2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Complementarity determining region; CDR; CDRH2; antigen; cytostatic; anglogenesis inhibitor; vascular endothelial growth factor receptor; VEGF; tumour; leukaemia; antibody; cell proliferation inhibitor; antibody heavy chain variable domain.

The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. Pl has an antigen-binding site located to the N terminus of immunoglobulin (Ig) light chain constant domain (CL domain), and P2 has an antigen-binding site located to the N terminus of the CHI domain. (I) is useful for: site located to the N terminus of the CHI domain. (I) is useful for: neutralising the activation of a vaccular endothelial growth factor (VEGF) receptor; reducing tumour growth; inhibiting vEGF induced migration of human leukaemia cells; blocking interaction of a protein and invivo and in vitro for investigative, diagnostic or treatment methods. The design of (I) provides for efficient production so that substantially all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute antibody and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain variable domain and in committees the heavy chain variable domain and in the committees the heavy chain variable domain and in the committees the heavy chain variable domain and the committees the committees the heavy chain variable domain and the committees 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Vascular endothelial growth factor receptor; VEGFR; antagonist; tumour; cytostatic; heavy chain; myelocytic leukaemia; lymphocytic; erythrocytic; monocytic; multiple myeloma; lymphoid cell; Hodgkin's disease; mouse;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            complementarity determining region H2 (CDRH2) version #2 incorporated into an antigen-binding protein described in the method of the invention.
New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VBGFR) in mammals particularly humans. The method involves greating the mammals with humanised VBGFR monoclonal antibodies (antagoniĝis). Humanised monoclonal antibody comprises humanised mouse
                                                                                                                                                                                     variable region joined to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute
                                                                                                                                                                                                                                        or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is humanised antibody heavy chain fragment used in the exemplification of the
                                     Inhibiting growth of non-solid tumor cells useful to treat bone marrow tumors such as leukemias or multiple myeloma comprises treatment with an antagonist of a vascular endothelial growth factor receptor
                                                                                                                                                                                                                                                                                                                                                                            Gaps

The present sequence is that of the heavy chain variable region of IMC-1C11, a mouse-human chimeric antibody that has vascular endothelial growth factor (VEGF) antegonist activity. The antibody, or a fragment of it, can be used as an anti-angiogenic molecule, together with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a controlling significant toxicity of the commontant angiogenic molecule inhibits or blocks the action of a rarest of molecule inhibits or blocks the action of a characterial angiogenic molecule inhibits or blocks the action of a characterial and a characterial factor such as VEGF or its receptor, and action of a characterial and a characterial cha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and is especially IMC-ICII. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease, especially a solid tumour, including breast carcinoma, lung carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, ochon carcinoma, contral nervous system tumour, neuroblastoma, glioblastoma multiforme or melanoma (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The antibody,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antigen-binding protein; antibody heavy chain variable domain; cytostatic; angiogenesis inhibitor; tumour; leukaemia; antibody; vascular endothelial growth factor receptor; VBGF; cell proliferation inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating or controlling an angiogenic dependent condition (e.g. neoplasm, collagen-vascular or autoimmune disease) in mammal by administering a combination of an antiangiogenic molecule and a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
                                                                                                                                                                                    The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. Pl has an antigen-binding site located to the N terminus of immunoglobulin (Ig) antigen-binding site located to the N terminus of immunoglobulin (Ig) is useful for:

COURTY (MECE) receptor; reducing tumour growth; inhibiting angiogenesis; reducing endothelial cell proliferation; inhibiting angiogenesis; reducing endothelial cells; blocking interaction of a protein and its ligand; promoting interactions between immune cells and target cells; and in vivo and in vito for investigative, diagnostic or treatment complexiant of human leurals endothelial part of investigative, diagnostic or treatment complexiantially all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute the region (e.g., CL2 and CH3 for an igd molecule) of a natural antibody and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. This sequence represents a heavy chain variable domain and a light chain variable domain in one polypeptide chain, described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic; heavy chaín; myelocytic leukaemia; lymphocytíc; erythrocytic; monocytic; multiple myeloma; lymphoid cell; Hodgkin's disease; chimeric;
                                                                                                  New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Vascular endothelial growth factor receptor; VEGFR; antagonist; tumour;

The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial cy growth factor receptor (VEGFR) in mammals particularly humans. The method involves treating the mammals with humanised VEGFR monoclonal antibodies (antagonists). Humanised monoclonal antibody comprises humanised mouse (ariable region ofoliaed to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphod cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is chimeric picli leavy chain fragment which is used for the construction of chimeric picli ligo expression vector. Chimeric picli heavy chain contains cloned and account of the construction of chimeric picli ligo expression vector. Chimeric picli heavy chain (VH) and human IgGI (gamma) heavy chain constant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inhibiting growth of non-solid tumor cells useful to treat bone marrow tumors such as leukemias or multiple myeloma comprises treatment with an antagonist of a vascular endothelial growth factor receptor -

The present sequence is that of the heavy chain variable region of IMC-ICILE a mouse-human chimeric antibody that has vascular endotheldal growth factor (VEGF) antagonist activity. The antibody, or a fragment of it, can be used as an anti-anglogenic molecule, copether with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-anglogenic molecule and a chemotherapeutic agent.

The anti-anglogenic molecule and a chemotherapeutic agent.

The anti-anglogenic molecule inhibits or blocks the action of a vascular andothelium survival factor such as VEGF or its receptor, and is especially IMC-ICIL. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease, especially a solid tumour, including breast carcinoma, lung contain prostate carcinoma, prostate carcinoma, prostate carcinoma, carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, contain contain the contain contains that can be created and contains colon carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, colon carcinoma prostate carcinoma, colon carcinoma prostate carcinoma, colon carcinoma prostate carcinoma colon carcinoma prostate carcinoma colon carci
antitumour; neoplasm; collagen-vascular disease; autoimmune disease; tumour; breast carcinoma; lung carcinoma; prostate carcinoma; colon carcinoma; ovarian carcinoma; neuroblastoma; glioblastoma; multiforme; melanoma; therapy; heavy chain.

The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (Pl) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. Pl has an artispen-binding site located to the N terminus of immunoglobulin (Ig) light chain constant domain (CL domain), and P2 has an antigen-binding site located to the N terminus of the CH1 domain. (I) is useful for: neutralising the activation of a vascular endothelial growth factor (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis; reducing endothelial cell proliferation; inhibiting vEGF induced migration of human leukaemia cells; blocking interaction of a protein and its ligand; promoting interactions between immune cells and target cells; and in vivo and in vitro for investigative, diagnostic or treatment substantially all of the antigen-binding proteins production so that substantially all of the antigen-binding proteins production so that the desired configuration. (I) is bivalent and bispecific, homogeneous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting anglogenesis, comprises a complex of two polypeptides and two second polypeptides .
                                                                                                                                                                                                                    Antigen-binding protein; single chain variable fragment; svFv; antigen; cytostatic; angiogenesis inhibitor; tumour; leukaemia; antibody; vascular endothelial growth factor receptor; VEGF; cell proliferation inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antigen-binding protein, single chain variable fragment version #2.
                                                                                                                                                                                                                                                                                                                                                                                               /note- "Heavy chain variable domain. anti-tumour immunity; to elicit an increased immune response to tumour associated antigen (TAA) and/or to induce an immune response to tumour associated antigen (TAA) and/or to induce an immune response to mutant or wild-type forms of TAA in mammals. (A) is: (i) a monoclonal antibody (MAb) to TAA, or its fragment; (ii) a peptide based on a CDR (abble to elicit antibodies to TAA); or (iii) a DNA that encodes the variable (V) region of MAb, in a gene delivery vehicle. The present sequence represents a peptide based on CDR2 of the heavy chain of anti-DNA antibodies (Ab) by immunising a mammal with a MAb directed to a domain containing a DNA-binding site of a DNA-binding protein (A) is used to treat a wide variety of primary and metastatic cancers, particularly those where p53 is involved. Ab are used for diagnosis (e, g to determine critical sequences in animal or plant breeding); to identify bacteria and other parasites; to determine
                                                                                                                                                                                                                                                 ó
and in tetrameric form. The heavy chain constant domains which constitute the Fr region (e.g., CHZ and CH3 for an 196 molecule) of a natural antibody and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. This is the amino acid sequence of a single chain variable fragment (scFV), an engineered protein containing a variable light and variable heavy domain on one polypeptide, described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes the use of an immunogen (A) to induce

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description

Sequence 2, Application US/09865198
Patent No. US20020103345A1
GENERAL INFORMATION:
APPLICANT: Zhu, Zhenping
TITLE OF INVENTION: Bispecific Immunoglobulin-Like Antigen Binding Proteins and Me
TITLE OF INVENTION: Production
FILE REFERENCE: 11245,47102
CURRENT APPLICATION NUMBER: US/09/865,198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Sequence 27, Application US/09865198

Patent No. US20020103345A1

GENERAL INFORMATION:

APPLICANT: ZUL, Zhenping

TITLE OF INVENTION: Bispecific Immunoglobulin-Like Antigen Binding Proteins and Me

TITLE OF INVENTION: Production

FILE REFERENCE: 11245/47102

CURRENT APPLICATION NUMBER: US/09/865,198

CURRENT FILING DATE: 2001-05-24

PRIOR APPLICATION NUMBER: US 60/206,749

PRIOR FILING DATE: 2000-05-24

NUMBER OF SEO ID NOS: 34

SOFTWARE: WordPerfect 8.0 for Windows

SEO ID NO 27

SED ID NO 27

MUNICE NO 27
                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Patent No. US30020103345a1
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Bispecific Immunoglobulin-Like Antigen Binding Proteins and Methor Production
FITLE OF INVENTION: Production
FILE REFERENCE: 11245/47102
CURRENT APPLICATION NUMBER: US/09/865,198
CURRENT FIGING DATE: 2001-05-24
PRIOR APPLICATION NUMBER: US 60/206,749
PRIOR PAPLICATION NUMBER: US 60/206,749
PRIOR FILING DATE: 2000-05-24
NUMBER OF SEQ ID NOS: 34
SOFTWARE: WordPerfect 8.0 for Windows
SEQ ID NO 74:
LENGTH: 147

Sequence 4, Application US/09974052

Sequence 4, Application US/09974052

Patent No. US20020165387A1

GENERAL INFORMATION:

APPLICANT: Tempest, Philip R.

APPLICANT: Tempest, Philip R.

APPLICANT: Armour, Kathryn

APPLICANT: Armour, Kathryn

TITLE OF INVENTYON: High Affinity Humanized Anti-CEA Monoclonal Antibodies

CURRENT APPLICATION NUMBER: US/09/974,052

CURRENT APPLICATION NUMBER: US/09/974,052

CURRENT APPLICATION NUMBER: US/09/974,052

CURRENT APPLICATION NUMBER: US/09/974,052

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1997-10-30

PRIOR FILING DATE: 1997-10-31

A; Description: Mechanisms that generate human immunoglobulin diversity operate from the A; Reference number: S31585
A; Reference number: S31585
A; Accession: S31600
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 1-136 <CUI>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                      -!- FUNCTION: GLUTEMINS ARE THE HIGH MOLECULAR WEIGHT SEED STORAGE PROTEIN OF WHEAT ENDOSPERM. THOUGHT TO BE RESPONSIBLE FOR THE VISCO-ELASTIC PROPERTY OF WHEAT DOUGH.
-!- SUBULT: DISULFIDE-BRIDGE LINKED AGGREGATES.
-!- MISCELLANEOUS: GLUTENINS ARE CODED BY SEVERAL GENES ON EACH OF THE GROUP 1 CHROMOSOMES OF WHEAT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
